

Lunch-and-Learn Program

Waterproofing 101 for Industrial Concrete and Masonry

Program Overview

Join us for an interactive discussion of interior- and exterior-waterproofing applications for concrete and masonry, including:

-  Alternative systems — and when to use them.
-  Two types of integral waterproofing explained.
-  The difference between positive- and negative-side waterproofing.
-  Using winter admixtures without adverse effects.

Learning Objectives

1. Understand how waterproofing concrete and masonry works.
2. Understand available options and when to use which product.
3. Understand how temperature and site conditions affect quality.

Presenter

Dan Saltsman has experience in all types of concrete and masonry projects, having represented Anti-Hydro International, Inc. since 2001. He holds both Bachelor and Master of Science Degrees in Construction Management from Eastern Michigan University.

Kuhlman University

1845 Indian Wood Circle
Maumee, OH 43537
